

## **AUTOMATIC FIRE DETECTION AND EXTINGUISHING SYSTEM**

**Dynamic Security Technologies Limited [DST]** offers the above mentioned services specifically to protect investments.

In many companies fire extinguishers are available especially in high fire risk areas. However the fire extinguishers have got limitations in that they need to be operated by someone in the event of a fire breakout.

**DST** proposes to install Automatic Fire Detection and Extinguishing System which will extinguish fire automatically using fire extinguishant gases and electronic equipment.

If a client intends to install a **computer server, telecoms control system, power generation control system** or any **indoor electrical installation**, we strongly advise them to consider the protection of their investment against fire and intrusion.

**DST** also provides **Access Control** for these high risk installations so that only authorized personnel have access to those sensitive areas.

The client's insurance company will also be more comfortable if they reduce the amount of the risk to their installation and naturally reduce their premiums.

**Dynamic Security Technologies Limited** cordially invites you to call upon them for free advise or quotation. To give a more accurate quotation we need the volume of the room to be protected which is achieved by multiplying the Length x Width x Height. We also need to know if the room is air conditioned, has a ceiling or under-floor partitioning.

### **TARGET MARKETS**

- **Banks**
- **Telecoms**
- **Power Generation Companies**
- **Mines**
- **Petroleum Companies**
- **Archives etc**

### **NB:**

Apart from the Automatic Fire Detection and Extinguishing System, we also got outdoor/large warehouse **FLAME DETECTORS** applicable to a variety of industries.
